## UNIVERSAL GREEN PHILOSOPHY

### ENERGY EFFICIENCY

Crimsafe products reduce the amount of energy required to operate the home. When a Crimsafe screen is added over a whole window, it can improve the windows ability to block solar radiation by up to 52%.

### RESOURCE EFFICIENCY

Up to 40% of a home's energy for cooling or heating is lost or gained thorough windows. Using Crimsafe over your windows can represent a huge savings on your energy bill and a dramatic cut in your greenhouse gas emissions.

### INDOOR ENVIRONMENTAL QUALITY

Create a healthier indoor environment for occupants with Crimsafe Security Screens. Crimsafe screens keep out up to 30% of harmful UV rays, prolonging life of interior furnishings and helping prevent sun damage to your skin.

### SITE AND COMMUNITY IMPACT

Consider the impact of the materials and the home building process on the land and the immediate community as well as the global community and environment. Crimsafe utilizes recyclable materials instead of disposable materials discarded into landfills.
